

FORD P132C: TURBOCHARGER/SUPERCHARGER BOOST CONTROL A VOLTAGE

OVERVIEW

Severity	:	<div><div>High</div></div>
DIY Difficulty Level	:	<div><div>Intermediate</div></div>
Repair Cost	:	\$100-\$400
Can I Still Drive?	:	Yes (Short-term only)

What Does The Ford P132C Code Mean?

The powertrain control module (PCM) continuously monitors the controller area network (CAN) for messages from the turbocharger actuator to set this DTC.

The turbocharger actuator monitors the system voltage to determine if it is within a calibrated range. If the system voltage is outside of the calibrated range a CAN message is sent to the PCM.
